

POWER PURCHASE AGREEMENTS

WHY BUY RENEWABLE ENERGY DIRECTLY?

A Renewable Power Purchase Agreement (PPA) with RES provides commercial, industrial and public sector clients with the opportunity to buy electricity at a fixed cost for an agreed term, often above 10 years. This enables our clients to strategically plan, avoiding any short term price spikes and the expected rise in future energy costs.

Only renewables are able to provide such long term security and certainty. A renewable PPA makes financial sense whilst achieving carbon reduction targets and helps demonstrate your company's commitment to sustainability by enabling more renewable energy to be brought on-line and globally reducing CO₂ emissions.

There is no capital or operational investment associated with ownership. With a PPA, a buyer can benefit from green energy without owning the project.

- » Provides a fixed term price guarantee in a volatile electricity market
- » No investment required - simply a contractual link to a specific generating station
- » Energy is zero carbon - helps meet your sustainability targets
- » Your customers receive an impressive sustainability message

HOW DOES IT WORK?

There are a number of ways to structure a PPA. We'll discuss your needs and use our expertise to find the appropriate agreement. Most commonly RES would sign an agreement with a client to sell electricity directly. Clients still retain an electricity supply agreement with their electricity supplier which covers any obligations and fulfils further requirements for energy. Typically our clients will be energy intensive large scale electricity buyers and be interested in the long term opportunities to acquire electricity from our substantial project pipeline.

WHY CHOOSE RES?

RES has delivered over 16 GW of renewable energy projects worldwide and supports an operational portfolio of assets exceeding 3.5 GW. A leader in PPAs, we understand the unique needs of corporate clients with 1 GW already under contract. RES is active in onshore and offshore wind, solar, energy storage and transmission and distribution.

Corporates are able to successfully secure long term renewable energy supply for their business at a stable price without any capital expenditure.
